F&O lists

Futures price change computed from one Angel One FULL quote snapshot (ltp vs previous close). Price gainers, price losers and OI gainers are not in this edition (page 12). OI change % = OI change ÷ (OI − OI change), from Angel One's OI-buildup feed. Long buildup = price up, OI up; short buildup = price down, OI up; short covering = price up, OI down; long unwinding = price down, OI down. Every label is checked against the signs before publishing.

Checks run before publishing

Validator rules A1–A10: timestamps, full-chain PCR recomputation and chain completeness, buildup signs, one price per contract, indicator convergence, public source links with status, attribution wording, dated headings, calendar status, index closes vs feed. An independent verification then recomputes indicators, pivots, PCR, closes and futures changes from the raw files with separate code. Raw files: `00_INBOX/mar ket_data/raw/2026-11-06_072055` (sha256 manifest).

LEARN ONE THING

Circuit breaker

A circuit breaker is a pause in trading that an exchange applies automatically when an index falls by a preset amount. Trading stops for a fixed time so that participants can absorb the news and orders can reset. Each country sets its own levels and pause lengths.

Example: On Friday, South Korea's Kospi opened 8.55% lower at 4,923.47, which triggered a 20-minute halt (S17, S19).

A halt only pauses trading. It says nothing about where prices go when trading resumes. India's exchanges publish their own market-wide limits.
