F&O lists

Futures price change computed from one Angel One FULL quote snapshot (ltp vs previous close). Price gainers, price losers and OI gainers are not in this edition (page 12). OI change % = OI change ÷ (OI − OI change), from Angel One's OI-buildup feed. Long buildup = price up, OI up; short buildup = price down, OI up; short covering = price up, OI down; long unwinding = price down, OI down. Every label is checked against the signs before publishing.

Checks run before publishing

Validator rules A1–A10: timestamps, full-chain PCR recomputation and chain completeness, buildup signs, one price per contract, indicator convergence, public source links with status, attribution wording, dated headings, calendar status, index closes vs feed. An independent verification then recomputes indicators, pivots, PCR, closes and futures changes from the raw files with separate code. Raw files: `00_INBOX/market_data/raw/2026-11-04_071718` (sha256 manifest).

GIFT Nifty vs Nifty 50

Nifty 50 is the index of 50 NSE stocks, calculated while the market is open. GIFT Nifty is a futures contract on that index, traded in GIFT City for much of the day and night. Because it is a futures price with its own expiry, it can sit above or below the index even with no news.

Example: At 03:01 IST GIFT Nifty Nov futures were 23,725, which is 85.85 points below Tuesday's Nifty close of 23,810.85 but 35 points below GIFT's own previous close of 23,760 (S6).

The same reading gives different gaps depending on what you compare it with, so check the base and the time. A reading taken hours before 9:15 AM can change and does not predict the opening.
